

Hello and thank you for allowing me to comment on the BPL issue. As an amateur radio operator holding an extra class license (station callsign K00OK) I must say that I am opposed to allowing a BPL system using HF/VHF spectrum to be allowed to go forward. There exists an overwhelming body of evidence that shows that this technology will pollute the HF/VHF spectrum to the point where weak signal work, and even most normal communication will be impacted.

Please do not enable a non-licensed Part 15 technology to render large areas of licensed spectrum unusable.

Thank you for your time.

Sincerely,  
Patrick St. Jean, K00OK
